K-DENT

DENTAL CARE, CONNECTED

A clearer view of care and clinic operations.

A customer guide to the K-Dent digital experience—from appointment booking to patient records, prescriptions, and practice insights.

PRODUCT GUIDE / K-DENT DENTAL HEALTHCARE CENTER

ONE CONNECTED WORKSPACE

From first contact to follow-up.

K-Dent brings the clinic's public information, appointment workflows, patient-facing tools, and staff workspace together in one web application.

01
Public clinic website

02
Patient appointment portal

03
Clinic operations dashboard

Designed around the care journey. Patients can discover services, contact the clinic, book appointments, and revisit their appointment and prescription information. Authorized staff can coordinate schedules, records, and day-to-day clinic activity.

What the platform brings together

1 Patient access

Account sign-in, online appointment requests, appointment status and history, and access to previous prescriptions.

2 Clinic workflow

Appointment review, doctor schedules, front-desk/offline bookings, searchable patient records, and visit documentation.

3 Clinical documentation

Patient history, diagnoses, medicines, investigations, clinical notes, and printable prescription documents.

4 Operational visibility

Date-filtered dashboards and reports for visits, registrations, patient groups, diagnoses, prescriptions, and investigations.

Feature descriptions in this guide reflect the capabilities present in the current K-Dent application.

A WELCOMING FRONT DOOR

Help patients take the next step.

The public website introduces the clinic and its services, then gives visitors a direct path to contact the team or book a visit.

Explore the clinic

Public-facing sections introduce the clinic, care experience, services, and patient feedback.

- Dental checkups
- Teeth whitening
- Root canal
- Tooth extraction

Contact the clinic

Visitors can send a message through the website contact form. Messages are delivered to the clinic contact inbox for staff follow-up.

Online appointment booking. Signed-in patients can choose an available doctor, date, and published time block, provide visit details, and submit an appointment request.

A straightforward patient journey

01 Create an account or sign in

Email and password accounts are supported, with Google and GitHub sign-in options.

02 Choose an available visit

Published doctor schedules drive the available appointment dates and times.

03 Track the appointment

The patient dashboard shows appointment status, visit details, and appointment history.

04 Review previous prescriptions

Patients can revisit their available prescription summaries from the portal.

Patient account controls

Manage profile details, update sign-in credentials, and review account settings from the patient workspace.

Password recovery

Request a password reset email through a generic confirmation flow. Reset links are single-use and expire after one hour.

Online appointments are requests; clinic staff review and manage appointment status in the operations dashboard.

PATIENT RECORDS & VISITS

Keep the clinical picture together.

The appointment workspace connects patient demographics and visit history with structured documentation for each encounter.

Patient profiles

Maintain patient identifiers and core details such as contact information, date of birth, sex, blood group, height, and weight.

Find the right record

Search patient records, open individual patient histories, and review previous visits and prescriptions.

Document each visit with useful context. Capture the complaint, relevant medical history, examination, investigation notes, clinical notes, treatment plan, and patient instructions.

Structured prescription and investigation details

Diagnoses

Record diagnoses alongside the visit documentation.

Medications

Document medicine, dose, route, frequency, duration, and instructions. Medicine suggestions are available through the catalog search.

Investigations

Record investigations with type, priority, reason, instructions, and status.

Prescription output

Issue and print a formatted prescription using the clinic and doctor details maintained in the workspace.

Visit continuity

Review patient history and prior visits to support follow-up work and continuity of records.

K-Dent supports clinical recordkeeping and workflow. Clinical decisions remain with the treating professional.

A COORDINATED DAILY WORKFLOW

Plan, review, and manage appointments.

Clinic staff can coordinate online requests alongside appointments created directly by the practice.

Review appointment requests

Filter requests by status and date, sort by newest or oldest, and page through the appointment list.

Respond and adjust

Authorized roles can accept or reject requests and edit appointment details when the workflow allows.

Serial assignment

Accepting a request assigns a serial for that visit date, helping organize the day's appointments.

Offline/front-desk booking

Staff can create an appointment for an existing patient or enter details for a new patient during booking.

Schedules that drive availability

Maintain doctor availability by day and time block, with clinic name, address, slot length, and enabled/disabled status. Published schedule times feed the online booking experience.

01
Select a doctor

02
Set clinic time blocks

03
Publish available times

Front desk and clinical teams share the same operational view. Appointment details include patient, doctor, visit time, clinic location, complaint, source, status, and serial when assigned.

Manage incoming messages

The staff contact inbox shows messages sent from the clinic website, distinguishes read and unread messages, and supports marking messages as read or deleting them.

OPERATIONAL VISIBILITY

Turn clinic activity into a clearer picture.

Dashboard analytics and detailed reports help staff review patterns in registered patients and recorded visits over selected time periods.

Patients

Total patient records and new registrations

Visits

Visit activity within a selected date range

Return

Returning-patient activity

Filter the timeframe

Use weekly, monthly, yearly, or custom date ranges to focus dashboard metrics and reports on the period that matters.

Activity charts

Review visit trends over time and patient age profiles through visual summaries.

Useful breakdowns

Explore diagnoses, patient age and sex, follow-up status, most prescribed medicines, and most requested investigations.

Detailed visit register

Search and filter visit records by patient, diagnosis, medicine, investigation, and date; sort results and page through the list.

Take reports with you

Export visit data as CSV or print the detailed visit report for offline review and sharing.

Built for practical review. Reports summarize recorded information; they do not replace clinical judgment or independently generated forecasts.

Report content reflects the records available to the signed-in user and selected date filters.

ACCESS THAT FITS THE TEAM

Role-aware tools for patients and staff.

K-Dent supports patient, assistant, doctor, and administrator accounts. Workspace capabilities are gated according to role.

Patient

Book appointments, view appointment history and status, review available prescriptions, and manage account settings.

Assistant

Support appointment operations and offline booking, with actions scoped to the permitted workflow.

Doctor

Manage appointment decisions, patient/visit workflows, and doctor and prescription-header details.

Administrator

Access administrative user and role-management tools alongside operational workflows.

Account and security controls. Members can update profile details and sign-in credentials, change email with confirmation, manage active sessions, and request account deletion with email confirmation.

Doctor profile and prescription identity

Authorized doctor and administrator users can maintain doctor name, qualifications, specialty, designation, registration, contact information, chamber details, and digital signature for the prescription header.

Sign-in choices

Email & password | Google | GitHub | Email verification | One-hour password reset link

Access depends on account role and configured clinic permissions. Session and account actions are available from account settings.

A GUIDED FIRST LOOK

See the workflow in action.

A short walkthrough can show how K-Dent fits into the clinic's day—from a patient's first visit to the team's follow-up work.

01 Discover
Review the public clinic website, services, and contact options.

02 Book
Sign in as a patient and submit a request using published doctor availability.

03 Coordinate
Review the request, update its status, and view the assigned visit serial.

04 Document
Open a patient record and review visit, diagnosis, medication, and investigation fields.

05 Share
Print a prescription or export and print a filtered visit report.

06 Follow up
Show the patient portal, appointment history, and previous prescriptions.
